Carlos Alberto Gomez Gonzalez

Junior research chair in Data Science for Earth, Space and Environmental Sciences

I am an astronomer and data scientist working at the interface of direct imaging of extrasolar planetary systems and machine learning. Following my interest in open research practices, I develop open-source scientific computing tools featuring advanced image processing and data analysis algorithms for astronomy. I applied, for the first time, deep learning techniques for detecting exoplanets through small-angle high-contrast imaging. I strive to conduct inter-disciplinary research, applying cutting-edge methods and following innovative scientific workflows.
